

ecm4u CONTROLS

user-friendly widgets for Alfresco.

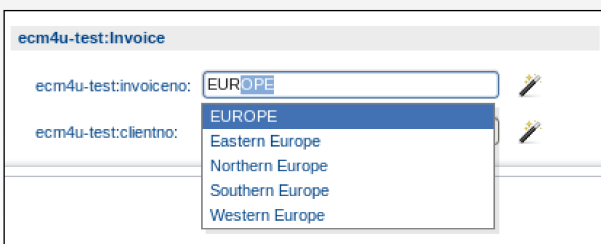

The module implements new input widgets in the Alfresco Explorer and enables you to create new controls – without Java programming.

With ecm4u Controls you will receive new, ergonomic input components in the Alfresco Explorer that provide intuitive and easy-to-use ways for an improved handling of Alfresco. The extension enhances the Alfresco Explorer with YUI input widgets that see to a modern and comprehensive layout.

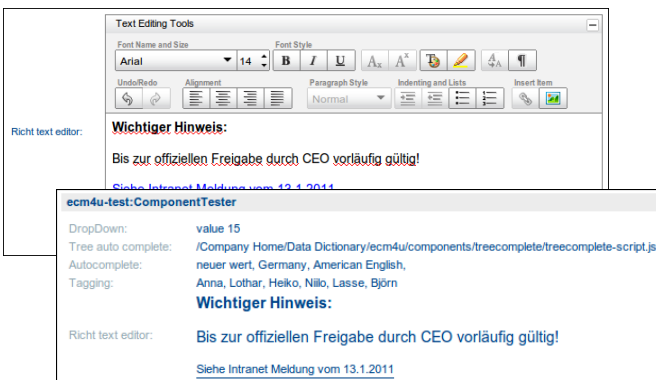

In addition, the module provides tools that enable you to create your own Explorer controls without programming in Java.

One of many useful widgets: Tree-Complete

Auto-Complete for your input fields

The Rich-Text-Editor: text maintenance in the document properties and many other use cases

ecm4u Controls includes

- a framework that allows you to create controls for the Alfresco Explorer without having to program in Java.
- five ready-to-use controls:
 1. auto-complete function,
 2. tree-complete function,
 3. YUI Rich-Text-Editor,
 4. standard HTML drop-downs
 5. inline-preview of PDF documents in the detailed view and the details edit pages of Alfresco
- the Explorer action „Direct Edit“ that gives you direct access to the Edit-Mask from the Browse View, without having to open the Detailed View in Alfresco.
